

Specialized Job Pricing Engine Manual

A practical guide for one-time and specialized job catalog pricing, proposal use, discount limits, examples, and scheduling rules.

Purpose

The specialized job pricing engine is used for one-time work that does not fit recurring commercial or residential pricing. It creates reusable job standards so proposals can be built faster and more consistently.

- Window cleaning
- Carpet cleaning
- Pressure washing
- Post-construction cleanup
- Floor work
- Move-out specialty work
- Custom one-time requests

Plain-language client explanation

This is a one-time specialized service, so it is priced from the requested job type, quantity, minimum service charge, and selected add-ons. The schedule is confirmed before work begins so the correct team, time, and equipment can be assigned.

Key Terms

Input	Value	Why it matters
Specialized job	Interior Window Cleaning	Reusable one-time service standard.
Service type	window_cleaning	Groups similar catalog items.
Unit type	per_window	Controls how quantity is measured.
Base rate	\$8.00	Standard price per unit.
Default quantity	20	Starting quantity when selected in a proposal.
Minimum charge	\$150	Protects small jobs from being underpriced.
Max discount	10%	Controls pricing exceptions.
Requires schedule	Yes	One-time work needs date and time before dispatch.

Pricing Flow

1. Admin selects a specialized job from the catalog
2. Proposal title and line item populate from the selected job
3. Quantity defaults from the catalog item
4. Unit price comes from base rate
5. Subtotal is quantity x base rate
6. Minimum charge is enforced if needed
7. Add-ons are added when applicable
8. Discount is checked against max discount percent
9. Scheduled date and time are required
10. Accepted proposal can generate the one-time job

Step 1: Create the Catalog Item

Every specialized job should be named clearly enough for admins and clients to understand.

Input	Value	Why it matters
Good name	Interior Window Cleaning	Clear client-facing service.
Good name	Post-Construction Final Clean	Specific service expectation.
Avoid	Special clean	Too vague for proposal reuse.
Avoid	Misc work	Does not explain scope.

Step 2: Set Service Type

Service type groups similar specialized jobs together for cleaner catalog organization and reporting.

window_cleaning
carpet_cleaning
pressure_washing
post_construction
floor_care
appliance_cleaning
custom

Step 3: Pick the Unit Type

Input	Value	Why it matters
fixed	One flat price	Useful when scope is always similar.
per_window	Price per window	Best for window cleaning.
per_sqft	Price per square foot	Best for pressure washing or post-construction.
per_room	Price per room	Best for carpet cleaning.

Input	Value	Why it matters
per_hour	Price per labor hour	Best for uncertain custom work.
per_item	Price per item	Best for appliance or furniture work.

Step 4: Set Base Rate and Default Quantity

Base rate is the standard unit price. Default quantity is what the proposal starts with.

Interior Window Cleaning
Unit type: per_window
Base rate: \$8.00
Default quantity: 20
Default proposal subtotal: 20 x \$8.00 = \$160

Step 5: Set Minimum Charge

Minimum charge protects small jobs from losing money after travel, setup, admin, and scheduling are considered.

Window cleaning base rate: \$8.00/window
Quantity: 8 windows
Calculated subtotal: 8 x \$8.00 = \$64
Minimum charge: \$150
Client price: \$150

Step 6: Set Max Discount Percent

Max discount protects standardized pricing and creates accountability for exceptions.

Catalog price: \$400
Max discount: 10%
Maximum allowed discount: \$40
Lowest standard price: \$360

Step 7: Add-Ons

Add-ons keep the base service clean and make extras visible on the proposal.

Input	Value	Why it matters
Window screens	\$3 per screen	Extra window scope.
Track cleaning	\$4 per track	Detail work often missed in base price.
Carpet stain treatment	\$20 per room	Optional carpet add-on.
Pet odor treatment	\$35 per room	Higher product and time cost.
Heavy dust detail	\$250 fixed	Common post-construction add-on.

Step 8: Scheduling Requirement

Specialized jobs should usually require schedule details before proposal submission or acceptance.

- Scheduled date
- Scheduled start time
- Scheduled end time

Full Worked Example: Interior Window Cleaning

Catalog setup:

Name: Interior Window Cleaning

Code: interior_window_cleaning

Service type: window_cleaning

Unit type: per_window

Base rate: \$8.00

Default quantity: 20

Minimum charge: \$150

Max discount: 10%

Requires schedule: Yes

Client request:

Windows: 28

Screen cleaning: 20 screens x \$3

Track cleaning: 28 tracks x \$4

Base window cleaning: $28 \times \$8 = \224

Screen cleaning: $20 \times \$3 = \60

Track cleaning: $28 \times \$4 = \112

Subtotal: \$396

Minimum charge: \$150

Final price: \$396

Max discount: 10%

Maximum discount: $\$396 \times 10\% = \39.60

Lowest standard price: \$356.40

Full Worked Example: Carpet Cleaning

Catalog setup:

Name: Carpet Cleaning

Code: carpet_cleaning

Service type: carpet_cleaning

Unit type: per_room

Base rate: \$45

Default quantity: 3

Minimum charge: \$175

Max discount: 10%

Requires schedule: Yes

Client request:

Rooms: 4

Stain treatment: 2 rooms x \$20

Pet odor treatment: 1 room x \$35

Base carpet cleaning: 4 x \$45 = \$180
 Stain treatment: 2 x \$20 = \$40
 Pet odor treatment: 1 x \$35 = \$35
 Subtotal: \$255
 Minimum charge: \$175
 Final price: \$255

Full Worked Example: Post-Construction Cleanup

Catalog setup:
 Name: Post-Construction Final Clean
 Code: post_construction_final_clean
 Service type: post_construction
 Unit type: per_sqft
 Base rate: \$0.35
 Default quantity: 2,000 sqft
 Minimum charge: \$750
 Max discount: 5%
 Requires schedule: Yes

Client request:
 Area: 3,200 sqft
 Window sticker removal: \$150
 Heavy dust detail: \$250

Base post-construction clean: 3,200 x \$0.35 = \$1,120
 Add-ons: \$150 + \$250 = \$400
 Subtotal: \$1,520
 Minimum charge: \$750
 Final price: \$1,520

Estimator note

Post-construction work should usually be reviewed before sending because dust level, debris, access, and contractor cleanup quality vary heavily.

Practical Starting Template

Input	Value	Why it matters
Interior Window Cleaning	\$8/window, \$150 minimum	Good reusable standard.
Carpet Cleaning	\$45/room, \$175 minimum	Simple room-based pricing.
Pressure Washing	\$0.25/sqft, \$250 minimum	Works for driveways and patios.
Post-Construction Final Clean	\$0.35/sqft, \$750 minimum	Higher review-risk service.
Floor Strip and Wax	\$0.60/sqft, \$500 minimum	Equipment-heavy specialty work.

Common Mistakes

- Using a fixed price when the job should be priced per unit.
- Forgetting minimum charge for small one-time jobs.
- Setting max discount too high.
- Using vague catalog names.
- Not requiring schedule for work that needs dispatch.
- Forgetting add-ons like screens, tracks, stain treatment, or heavy dust detail.
- Pricing post-construction work without review.
- Using specialized jobs for recurring work that should be commercial or residential.

Final Review Checklist

- Catalog item matches the requested job.
- Service type is correct.
- Unit type matches how the work is measured.
- Quantity is correct.
- Base rate is current.
- Minimum charge is enforced.
- Add-ons are selected and priced correctly.
- Discount does not exceed max discount.
- Schedule date and time are set.
- Proposal title is clear.
- Accepted proposal can generate the one-time job.
